

**no downtime,
no excuses**

business continuity and disaster tolerance solutions

With 24 x 7 operation becoming mainstream, continuous application availability is an increasingly important component of any HP NonStop™ server environment. HP's NonStop Enterprise Division provides a full suite of products for complete application protection.

hp NonStop transaction management facility (NonStop TMF) software

- Ensures database consistency
- Enables recovery from inadvertent database modifications
- Accelerates application performance through more efficient data access
- Is the foundation for data protection on any NonStop server

hp NonStop remote database facility (NonStop RDF) software

- Focuses on disaster tolerance that scales with any application
- Provides flexible configuration
- Integrates tightly with the disk manager
- Extends the NonStop server's legendary fault tolerance to true disaster tolerance

hp NonStop AutoTMF software

- Offers automatic database protection for applications that do not currently use NonStop TMF software
- Provides more complete protection for existing applications that use NonStop TMF software
- Enables all applications to use NonStop RDF software for protection and data replication, without reprogramming

hp NonStop AutoSYNC software

- Provides "set and forget" synchronization of non-database files, such as edit, object code, and macro files
- Ensures that all application changes are replicated automatically to other systems
- Can be used for automated file distribution
